Simple Tarot Card Reader App

Project Overview
I plan to develop a Tarot Card Reader application allowing users to pick cards and read tarot. The app will simulate shuffling a tarot card deck, enabling the user to select cards and provide interpretations of their meanings.

Development Tools
IDE: Android Studio
Programming Language: Java
Database: Room Database for storing card information
Version Control: Git

Main Features
Card Database: Implementation of 22 major arcana cards (or 10 cards)with images, names, and interpretations.
Shuffling action: Visual representation of cards being shuffled
Card Selection: An Interactive interface or button for selecting cards
Card Reading: Display of selected card with detailed interpretation

Project Timeline
Week 1: Design database structure, create Room entities and DAOs, collect card information
Week 2: Implement UI layouts and basic navigation
Week 3: Create card-shuffling action and selection functionality
Week 4: Implement card reading display and interpretation
Week 5: Testing, debugging, and final polishing
